**Landscape Block**

**Knob Style Block**

*Easy to Use*

Knob Style Landscape Blocks are designed with simple functionality. With two knobs on top fitting into a recess on the bottom, these blocks fit together like giant Legos. The blocks are purposely built half as wide as they are long. Because of this, turning a corner does not require special blocks. The knob placement and block dimensions allow you to simply turn your block 90 degrees at a corner and maintain a running bond.

*Decorative*

The knob style landscaping blocks can be created with a decorative 2” Stack Stone pattern on the face of the blocks for a pleasing look that goes with most landscapes.

*Coloring*

Coloring your blocks is optional. Most concrete block coloring is obtained by applying a concrete stain. A typical application is to spray on a base coat over the entire wall. This covers any variations of color from block to block. Then two or three more colors can be sponged, or ragged onto the individual “stones” to create a more natural look.

*Durable*

The knob style landscape blocks are poured with 4000# psi concrete and fiber. They measure 24” x 24” x 48” and weight approximately 2400 pounds each.

*Cost*

The Knob Style Landscape Blocks are competitively priced and delivery is available. Please call for current prices.

---

**Mid-Size Block**

*Easier to Handle*

Mid-Size Landscape Blocks are large enough for the most demanding job, yet small enough to be handled with light-duty equipment. Each block weighs approximately 560 pounds, light enough to be handled with a skid-steer.

The Mid-Size landscape block steps back one inch on every course allowing it to lean back into the earth it is retaining. With tapered sides, the Mid-Size block can create curved walls with a radius as tight as six feet to the back of the block.

*Better Proportioned for Residential Landscaping*

The smaller size of the Mid-Size landscape block is better proportioned for residential landscaping where the larger blocks tend to overwhelm the scale of the house.
