Oil Spill Prevention, Control, and Countermeasure (SPCC) Program - Fuel Containment Tanks

The goal of SPCC program is to prevent oil spills into waters of the United States and adjoining shorelines. Oil spills can cause injuries to people and damage to the environment. A key element to this program call for farmers to have an oil spill prevention plan, called a SPCC PLAN. These Plans can help farmers prevent oil spills which can damage water resources needed for farming operations.

As part of this Plan, farmers who store more than 1,320 gallons of fuel must add secondary containment systems to their fuel storage. The secondary containment must hold 110 percent of the largest tank's volume and the bottom and walls must have a permeability of less than .03 inches per day. Boom Concrete has precast concrete tanks ready for delivery to meet your containment needs.

TANK PRICES

1200 CISTERN	\$700.00
STOCK TANK	\$800.00
HALF CISTERN	\$925.00
